DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: The applicant's claims a coolant composition, but fails to claim compounds or components that make up said composition.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 00/33407.

The reference teaches several heat transfer fluids alone or in mixtures for use in a fuel cell power generation system (page 13, lines 1-1-7 and page 16, lines 1-31). The reference specifically teaches that protic liquids such as diols may be suitable in some circumstances (page 16, lines 29-31).

Art Unit: 1751

The reference fails to teach all of the instantly claimed properties and the use of 1,3-propanediol as the coolant.

With respect to claim 1 and 6 since the applicant has failed to disclose which compounds are useful with the invention, the examiner takes the position the many of the compounds, specifically the alcohols, with freezing points below - 40 centigrade disclosed as a heat transfer liquid would read on the instant claim. With respect to claims 2-5 the reference specifically teaches that protic liquids such as diols may be suitable in some circumstances, one would be motivated to use 1,3-propanediol when the application requires low toxicity.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to create the instantly claimed composition as the reference teaches the use of specific alcohols or diol where suitable in a fuel cell power generation system.
